

Enhance Business agility by Weaving Security into your operating DNA

Security is one of the biggest challenges

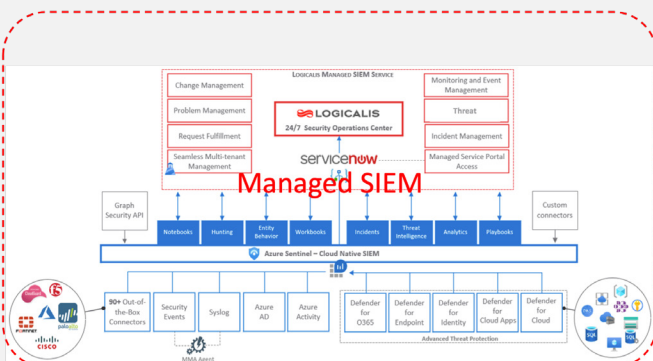

many organisations face today

- 95% of Cybersecurity breaches are caused by Human error (Cybint 2020)
- 88% of organisations worldwide experience spear phishing attempts in 2019 (Proofpoint, State of Phish 2020)
- 68% of business leaders feel their cyber security risks are increasing (Accenture 2019)
- 207 – The average number of days it took to identify a breach in 2020 (IBM 2020)

To compete in the modern marketplace, businesses must be able to adapt to opportunities in real-time. This requires a digital operating model that provides unprecedented levels of agility and flexibility whilst simultaneously meeting the highest standards of customer security and data integrity. That's why we designed our Secure OnMesh solution. It weaves real-time security telemetry and response into every element of your digital fabric, so you have the confidence to focus on what matters most to your business – driving greater agility, innovation, and growth.

Secure On Mesh

- Let us help you understand where your SIEM costs are - We know where to look and review ingestion costs as a standard part of the service
- We can go after higher fidelity alerts etc - If it's of no value we won't use it, so we'll guide you accordingly
- Employ our skills to implement your SIEM
- We have a team of people looking after Sentinel for multiple customers all day
- We'll tune the SIEM for you - If it's noisy, we'll figure out how to tune it for high-fidelity alerting
- We'll manage the Incidents for you - We'll notify you with recommendations for action, based on our experience
- Daily checks, health checks, monthly service reporting - Near constant feedback loop, customer engagement is key!

Managed SIEM service and 24/7 SOC

Add on Managed Defender Services for advanced threat protection

Ad-hoc Emergency Security Incident Response service available, if required.
